Work experience

Customer Service Rep. at Alorica

Oct. 2022 ~ Jun. 2023

- I helped US customers troubleshoot various devices, and provided them with an amazing and human experience over the phone.
- I also supported my workmates in their job thanks to my knowledge and ability to communicate and answer their questions.
- I developed my soft-skills and English up to a point I could have never imagined by speaking English 7hrs a day non-stop.

Dev experience

tenzo.tech my personal website.

Created with React, here I showcase the projects I have done.
I designed it in Figma and built it from scratch after completing a React Learning Camp by **Rootstrap**, from August to December 2023.

.ID a Spotify powered social network. react.js ~ sass ~ firebase ~ spotify api ~ node

- The **Spotify API** is used to search through their database and allow users to share their favorite songs and artists. I created an API with **Node** and **Express** for the communication between the site and the third party services I use and the error handling. I implemented authentication using **Firebase Auth** while keeping track of the posts and the users in **Firestore**, and saving all the needed media in **Storage**.
- I created all the components using **SASS** and **CSS modules** after designing the overall layout in **Figma**. The concept has been evolving through time and it is coming to be an *effective* and *appealing* solution.
- It is deployed on **Vercel** and the API is hosted in **Digital Ocean**; thanks to **GitHub Education** that provides learners the tools we need to make our *ideas come to life*.
The idea behind this project is to *connect people through music* without keeping track of followers nor motivating marketing and ads, just the pure joy of sharing your favorite tune and expressing yourself.

Education

Electrical Engineering at UdelaR

2022 ~ Present

Web Development at Ceibal, "Jóvenes a Programar"

2022 ~ 2023
