tenzocodes@gmail.com

tenzo.tech

I'm an **Electrical Engineering student at UdelaR**, passionate about delivering high-quality software and solutions, with the capability to learn whatever skills needed, even on the fly, in order to meet requirements.

Knowledge on agile methodologies, high proficiency in English and extremely resourceful.

I am great at troubleshooting and problem solving, including technical and non-technical problems.

TECHNICAL SKILLS

HTML, CSS, JAVASCRIPT (ES6), TAILWINDCSS, REACT, NODE.JS, GIT & GITHUB, ADOBE SUITE (PHOTOSHOP, XD, ILLUSTRATOR, INDESIGN).

Education

Aug. 2023 - Present

Rootstrap

React Learning Camp

ROOTSTRAP

I'm currently enrolled in this Learning Camp to finally get some proper formation in React that is not reading the docs or building something myself. We are using GitHub and Trello to keep track of our little projects and we learned about version control and different branches. My main goal after completing it is to create components in an accessible and scalable way while following best practices.

March 2022 - 2023

Ceibal, "Jóvenes a Programar"

Web Development

We learned the foundations of web development while working on some functionalities of an e-commerce, like the login page, how to retrieve data from an API that we want to display in some way, etc. We used vanilla JS to make it come alive and we learned about Express.js to get some kind of back-end going as well.

Experience

Alorica Costumer Service Representative

Oct. 2022 - Jul. 2023

My tasks involved primarily helping US customers troubleshoot various devices, providing them with an amazing and human experience over the phone. I also supported my workmates in their job thanks to my knowledge and ability to communicate and answer their questions. This was my first job ever, and I developed my soft-skills and English to a point I could had never imagined.
